# **Abstract**

Internet movie database will be a database of world films and television series which will include cast and their respective category and ratings. Data into the database can be contributed by volunteer contributors. The database will have information about the role of an actor and will show the names of the movies they have been a part of. Additional information will also be included such as movies and TV shows adaptions from books, awards won by actors, actor management and movie production companies and actors as voice actors in audiobooks. All of these data will be interconnected allowing us to seamlessly browse through and search for data in the database.

## **Design & Motivation**

The design to the database software will enable the user to access data easily without showing unnecessary information. The design layout will be simple which will allow data retrieval and data entry to be done easily.

### **Platforms**

Programming Language: JAVA

Database: SQL Server

Tools: Netbeans IDE, Microsoft SQL server

# **Features**

Features will be separately accessible to three types of users – Generic, Registered and Admin.

### Admin: (exclusive to this type of users only)

- Add new movie/TV shows/actors/companies and their details into the database
- Update any data in the database

### Registered: (accessible to Admin type as well)

- Add reviews and ratings to movies and TV shows
- Mark movies and TV shows as favorites

#### Generic: (accessible to all users):

obtain any information from the database

# **Schema Translation:**

Actors (Actor\_ID, DOB, Nationality, Name, Years Active)
